

Socket® Digital Phone Connection for Palm™

Use Your Mobile Phone as a Wireless Modem

In the Information Age, success depends on timely access to email, the Internet, and data files. Socket is pleased to present the Digital Phone Connection, a simple solution for Palm users that makes mobile access easy. The Digital Phone Connection is a snap-on attachment that enables the newer Palm handheld computers to use a mobile phone as a modem to check email, access website clippings, and transmit data to the Palm handheld screen — all remotely and seamlessly.

Socket's solution includes a low-profile connector that plugs into the Universal Connector of Palm handhelds and attaches via a cable to your data-enabled phone.

Wireless Internet Access

Access the web with web clippings. It's an efficient way for people on the move to tap into the web. Information you need is quickly "clipped" from the site and delivered in a format for viewing on your Palm.

Check your email. Don't let your email pile up when you're away from your desk. Check it remotely — at the airport or during the morning commute. You can use your Palm with the Digital Phone Connection without having to pay extra service fees, unlike other mobile data options. It's everything you need to connect a compatible data-enabled mobile phone to a newer Palm handheld computer. It's a single slender cable that slips easily into a pocket, purse or briefcase.

FEATURES

- Includes everything you need to use your mobile phone as a modem with these Palm units:
 - m125 - m130
 - m500 - m505
